

CASE STUDY

LOW PRESSURE OVERMOULD SOLUTION

Suitable for many applications, overmoulding offers a reliable, fast and cost-effective route to market:

- improved product design
- increased environmental protection
- cable strain relief
- eliminated vibration for component stability
- reduced manufacturing costs
- enhanced aesthetic presentation with a customized finish

Camis recently completed a project enabling the production of a specially wired limit switch to replace the normal potting method. The process included branding the overmold with the customer's logo, thereby providing a personalised as well as improved design and cost-effective solution.
